

Get Visibility. Prevent Data Security/Privacy Incidents

Problem Statement: Enterprise data is messy and has piled over the years. Finding data security and privacy issues is complex and time-consuming. Hence organizations are sitting on millions of dollar risks.

Reduce your data protection efforts from weeks to hours

Protecto provides visibility into your data - what data do we have? who has access to it? how is it used? Protecto brings AI and Privacy Engineering to automate the following complex steps to find data security and privacy risks.

	Without Protecto	 PROTECTO
✓ Create data inventory, scan for PI/PII	1-2 weeks	2-3 hours
✓ Analyze user privileges to find overexposed data	1 week	<1 hour
✓ Audit logs to identify inactive users	2-3 weeks	1-2 hours
✓ Discover unused/stale data	1-2 weeks	<1 hour
✓ Find security/privacy risks	2-3 weeks	<1 hour
✓ Quantify and prioritize the risks	1-2 weeks	<1 hour
Total hours	10-12 Weeks	~5-6 hours

The table above compares the estimated time to analyze 1 TB of data with 250 tables for breach risks, audit user access, analyze activities for privacy risks, and analyze risks. Traditional methods require 500 hours (~12 weeks) vs. 5-6 hours by Protecto - a 100x reduction in time and effort.

Spend dramatically less time monitoring, meeting compliance, and protecting data

Prevent security and privacy incidents before they happen

Reduce stale data and costs. Improve your data posture
